180 Amada Court  
Schaumburg, IL 60173  
877-262-3287

Tim Rice, President/  
Owner Microform  
Precision, LLC

From its headquarters in Sacramento, CA Microform Precision thrives by exceeding customer expectations for excellence in a wide variety of industries. The company is celebrating its 40th anniversary with 25 years under the current management — who have transformed Microform Precision into one of the largest custom metal fabricators in the greater Sacramento region. Today, with over 57,000 square feet of manufacturing, office, and warehouse space, the company continues to prosper based on a steadfast commitment to unsurpassed quality, and consistent investment in industry-leading technology. Some of the most recent acquisitions include two ENSIS Fiber Lasers and AMS CL automation.

**ENSIS 3015 AJ Fiber Laser Cutting Systems:** According to Tim Rice, President/Owner “We were thrilled with the performance of our first ENSIS. That machine has been incredible — cutting a wide range of thin-to-thick materials and blowing everything else away. To keep pace with our current growth rate, we needed additional laser capacity. We saw this as a good opportunity to invest in a second ENSIS and add automation to run lights out.”

**AMS 3015 CL Automation:** The benefits of automation combined with AMADA fiber lasers include lower cost of operation, faster ROI, more reliable and predictable product schedules, and better overall utilization of both machine and floor space. As a California-based manufacturer, Microform Precision faces strict regulatory requirements and higher labor costs associated with numerous labor laws that don't apply in most other states. According to Rice “We are committed to continuous improvement in order to retain customers that have left the state and to attract new customers from outside our area. Therefore, we've worked diligently to control costs and quality by improving our processes and increasing our efficiencies. This has required an investment in industry-leading technology. AMADA continues to be an essential partner in that endeavor.”

“Our current growth rate exceeds 35%. That wouldn't be possible without our ENSIS Fiber Lasers and automation.”

— Tim Rice  
President/Owner

Automation Optimizes  
Productivity and Profit.

Standardized sheets reduce material costs.

The ENSIS Series is manufactured in Brea, CA. The AMS CL Series is manufactured in Brea, CA and High Point, NC.
