AMADA AMERICA, INC.

180 Amada Court
Schaumburg, IL 60173
877-262-3287

In the midst of COVID, our partnership with AMADA enabled us to successfully respond to a 500% increase in the demand for our products.”

— Walter Ellis

Walter Ellis, Executive VP/GM RGF Environmental Group

Headquartered in Riviera Beach, Florida, RGF Environmental Group, Inc. manufactures over 500 environmental products and has a 36-plus year history of providing the world with the safest air, water, and food without the use of chemicals. As a result of COVID-19, RGF has experienced more than a 500% increase in the demand for the company's residential, commercial, and medical FDA-cleared products. To address major supply chain interruptions and support the unprecedented increase in product demand, RGF turned to AMADA and purchased three VENTIS fiber laser cutting systems and two electric press brakes.

Purchasing, installing, and then training operators on new equipment can present challenges even in the best circumstances. According to Walter Ellis, Executive VP/GM at RGF, “AMADA ensured a seamless transition despite restrictions imposed by a global pandemic. “We were in the middle of a lockdown with little to no travel taking place. So, AMADA provided a live feed demonstration from their Carolina Technical Center in High Point, NC. The live demo provided a convenient way for us to verify the capabilities of VENTIS and the two electric press brakes. My team and I gathered in our conference room and verified results as AMADA demonstrated their latest technology using our parts.”

“Despite COVID restrictions, AMADA wasted no time in getting us up and running and providing on-site training for my team. After the first day of training, we were ready to go. Nevertheless, AMADA provided a couple more days of training to ensure we benefit from the full capabilities of the equipment.”

“At RGF, we consistently take extraordinary measures to ensure our customers are best served. AMADA embraces that same business approach. As a result, AMADA continues to be an invaluable partner in RGF's success.

VENTIS outperforms higher wattage fiber lasers at a considerably lower operating cost. Locus Beam Control (LBC) can freely manipulate the laser beam to create an infinite number of locus patterns — ensuring the optimum beam shape for each specific cutting application.
